FULL STACK DEVELOPER

Passionate about creating attractive and functional digital solutions. I use technologies such as React, Redux, Next.js, JavaScript, Node.js, Sequelize, CSS, HTML, Express, and PostgreSQL. I have knowledge in: Web development, creating Landing Pages, creating e-commerce sites, and configuring databases. I enjoy working in a team to achieve common goals. My creative approach allows me to find innovative solutions and adapt them to the needs of each project. I am excited to face new challenges and contribute to the success of the projects I participate in.

Certificate:
https://linkedin.com/in/giulianavazquez/details/education/

2024
FREECODECAMP

Responsive Web Desing 300 hours of work.
Certificate:
https://www.linkedin.com/in/giulianavazquez/details/certifications/

EXPERIENCE

01/05/2024 - actually "Organizador Mensual" (in progress)

- I am currently developing my own web application to maintain the consistency and discipline that this work requires. This application is designed to organize and manage personal expenses. Includes filter for purchase categories, fixed expenses, variable expenses and expense history. Visit my github for future updates.

Achievements:
• Use Next app Router.
• Integrate an AI chatbot.
• Develop each component, managing to communicate with each other so that they fulfill their functions correctly.

Used technology: •JavaScript • HTML • CSS •React •Node.js •Next.js

GitHub project: https://github.com/Chitichi/organizador-mensual

Deploy: https://organizador-mensual.vercel.app/

1/01/2023-01/02/2023 "Novelty Books" • Henry (professional practice)

- I worked mainly on the user flow, focusing on the forms for creation, as well as on login, password recovery, and the user profile.

Achievements:
• Make the forms with your correct verifications for each field.
• Perform user login data flow, as well as password recovery in case of forgetting.
• Work with a team of 5 people using GitHub in an organized and optimal way.

Used technology: •React •Next.Js •JavaScript.

GitHub project: https://github.com/Chitichi/PFFront

15/12/2022-01/01/2023 "Henry Dogs"• Henry (professional practice)

- Develop a web application focused on displaying dog information obtained from an external API and database. In this application, users can filter the dogs by temperament, breed, and weight. Additionally, users can create a new breed of dog with specific characteristics. Create a page with cards that show each of the dogs in detail.

Achievements:
• I obtained the dogs' data from an API, managing to incorporate the information correctly.
• Develop the styles of the entire project with CSS achieving an elegant and attractive style.

Used technology: •JavaScript • HTML • CSS •React •Redux •Node.js •Express • Sequelize.js •PostgreSQL
